**Problema** Dado  $\nu \in \mathbb{R}$  considero

$$x_{n+1} = \nu x_n^5.$$

estudia el número de puntos fijos y su estabilidad.

$$|8'(0)| = |0| = 0 < 1 \implies x_* = 0$$
 es asintóticamente estable.  
 $|8'(0)| = |5| < 1 \implies x_* = 1$  inestable, the  $|8'(1)| < 1 \implies x_* = 1$  inestable, the  $|8'(1)| < 1 \implies x_* = 1 \implies x_*$ 

Solución: 
$$\sqrt{x_*} = \sqrt{\frac{0}{100}} \text{ inestable}$$
 $\sqrt{x_*} = \sqrt{\frac{1}{100}} \text{ inestable}$ 
 $\sqrt{x_*} = \sqrt{\frac{1}{100}} \text{ inestable}$ 
 $\sqrt{x_*} = \sqrt{\frac{1}{100}} \text{ inestable}$ 
 $\sqrt{x_*} = \sqrt{\frac{1}{100}} \text{ inestable}$
